

CLIMATE CHANGE AND EXTREME WEATHER

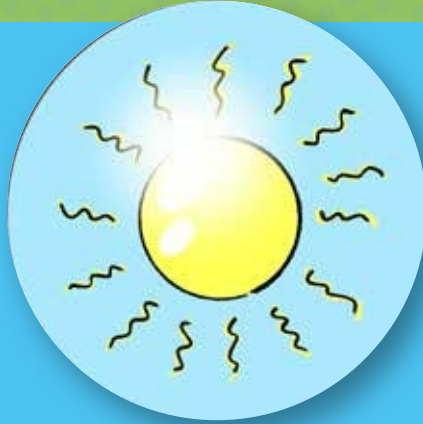

How
can we
#RaiseTheGame
for Climate
Action ?

UNITED NATIONS
SOUTH AFRICA

What is climate change doing ?

Climate change is causing higher temperatures, resulting in more droughts, heatwaves, floods and storms.

The extreme weather is affecting our food supply in different ways.

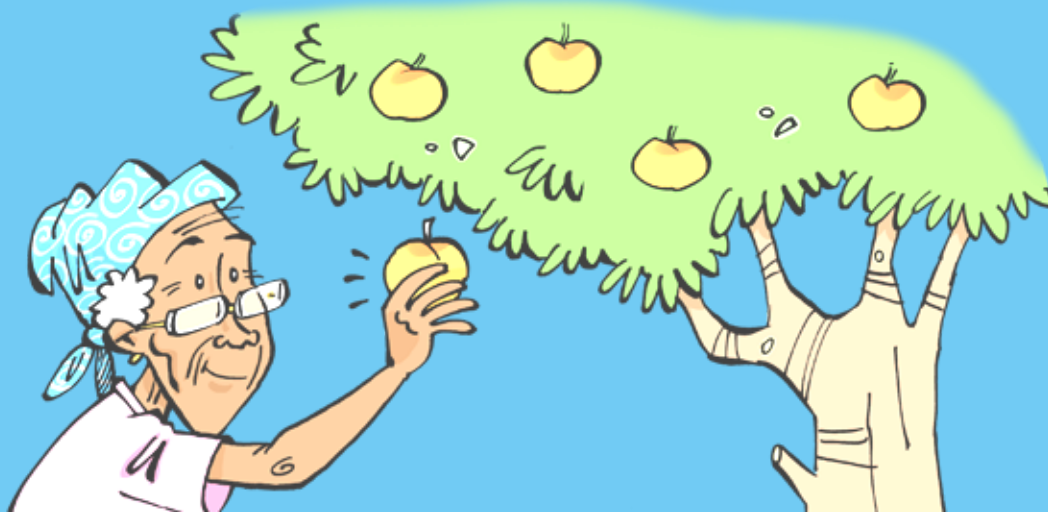

Climate change is reducing rainfall, making our water supply more scarce than ever.

We need to be prepared for these changes by doing what we can in our own communities.

We all have a role to play to #RaiseTheGame for Climate Action.

We can begin by restoring our rainforests, harvesting water, and planting crops that are suited to the changing climate.

With the increased possibility of natural disasters, we need to think locally.

So let's work together to use the resources we have ...

... And let's make sure no one is left behind.
